

AI Resume Analysis Report

Candidate Information

Name : Mohanakumar S

Email : Not Found

Phone : Not Found

ATS Score

40/100

Detected Skills

Flask, Git, Machine Learning, Python

Missing Skills

Java, SQL, GitHub, AWS, Docker, Linux

AI Suggestions

- Your ATS score is low. Add more relevant technical skills.
- Learning Java improves placement opportunities.
- Learn SQL to strengthen database knowledge.
- Add GitHub projects to showcase your coding work.
- AWS Cloud is highly valued by recruiters.
- Docker knowledge improves deployment skills.
- Linux is an important skill for software engineers.

Resume Improvement Roadmap

- {'week': 1, 'skill': 'Java', 'tasks': ['Learn Core Java', 'Build one Java Mini Project']}
- {'week': 2, 'skill': 'SQL', 'tasks': ['Learn SQL Basics', 'Practice 25 SQL Queries']}
- {'week': 3, 'skill': 'GitHub', 'tasks': ['Improve GitHub README', 'Upload 3 Quality Projects']}
- {'week': 4, 'skill': 'AWS', 'tasks': ['Learn AWS Cloud Basics', 'Deploy a Flask App on AWS']}
- {'week': 5, 'skill': 'Docker', 'tasks': ['Install Docker', 'Containerize your Flask Project']}
- {'week': 6, 'skill': 'Linux', 'tasks': ['Learn Linux Commands', 'Practice Shell Scripting']}

Job Match Score

100%

Matching Skills

Git, Python

Missing Job Skills

AI Resume Review

Strengths:

- **Strong Foundational Core:** Your skills in Python, Machine Learning, and Flask represent a highly desirable stack for modern AI/ML and Backend development roles.
- **Relevant Project Concept:** "AI Resume Analyzer" is an excellent, highly relevant project that showcases practical application of NLP (Natural Language Processing) and machine learning.
- **Clean Structure:** The template used is clean and free of distracting visual elements (like progress bars or multi-columns) which ATS systems prefer.

Weaknesses:

- **Critical Lack of Content:** The resume is far too brief. It lacks essential sections such as Contact Information, Education, and Professional Experience (or Academic/Personal Experience).
- **No Project Details:** Listing only the title "AI Resume Analyzer" without any description, technologies used, or achievements gives recruiters and ATS scanners zero context to evaluate your hands-on capability.
- **Missing Core Keywords:** You are missing heavy-hitting industry keywords (Java, SQL, GitHub, AWS, Docker, Linux) that employers in this space actively filter for, which is why your ATS score is at 40/100.
- **Git vs. GitHub Distinction:** You listed "Git" but missed "GitHub." While related, ATS algorithms look for both. GitHub also serves as your online portfolio.

Suggestions:

- **Flesh Out Your Project (Use STAR Method):** Add 3-4 bullet points under "AI Resume Analyzer." Explain the *Situation* (the goal of the project), *Task* (what you needed to build), *Action* (how you built it using Python, Flask, etc.), and *Result* (e.g., "achieved 92% parsing accuracy" or "deployed on AWS").
- **Add Missing Standard Sections:** Immediately add an **Education** section (Degree, Major, University, Graduation Year) and a **Contact Information** section (Email, Phone, Location, LinkedIn, and GitHub link).
- **Integrate the Missing Skills:**
 - * **AWS & Docker:** Deploy your AI Resume Analyzer project using a Docker container on AWS (Elastic Beanstalk or EC2). This allows you to legitimately add "AWS" and "Docker" to your resume.
 - * **SQL:** Integrate a database (like PostgreSQL or MySQL) into your project to store analyzed resume data, allowing you to add "SQL" to your skills.
 - * **GitHub:** Host your project code on GitHub and link your profile at the top of your resume.
- **Address Java and Linux:** If the job description heavily emphasizes Java and Linux, complete a quick crash course or build a small microservice in Java on a Linux VM/WSL environment to justify adding them to your skills section.
- **Optimize for ATS Parsing:** Ensure your section headers use standard terms ("Technical Skills", "Projects", "Education") so the ATS can categorize your information correctly and boost your score above 80+.

AI Cover Letter

Dear Hiring Manager,

I am writing to express my strong interest in the Python and Git developer position. With a solid foundation in software development, machine learning, and modern web technologies, I am confident in my ability to bring immediate value to your technical team.

Throughout my academic and project experience, I have developed strong proficiency in Python, utilizing it to build efficient applications and implement complex algorithms. My technical toolkit also includes working with Flask to develop robust backend solutions and leveraging Git for version control, collaboration, and streamlined code management.

A key highlight of my practical experience is the development of my AI Resume Analyzer project. This application showcases my ability to integrate machine learning concepts with Python to solve real-world problems, automate processes, and deliver functional software solutions from conception to deployment.

I am a detail-oriented professional who thrives in collaborative environments and is always eager to learn and adapt to new technologies. My combination of Python expertise and practical project experience makes me a great fit for this role. I am ready to contribute effectively to your upcoming projects and support your team's objectives.

Thank you for considering my application. I look forward to the opportunity to discuss how my skills and experiences align with your needs.

Sincerely,

Mohanakumar S
