

AI Resume Analysis Report

Generated on: 05 Aug 2026 01:37 PM

Candidate Information

Name : MOHANAKUMAR S

Email : mohankumar@email.com

Phone : Not Found

ATS Score

70/100

Detected Skills

AWS, C, Deep Learning, Git, GitHub, Java, Linux, Machine Learning, NumPy, Pandas, Python, Scikit-learn

Missing Skills

SQL, Flask, Docker

AI Suggestions

- Good resume. Adding a few more industry skills can improve it.
- Learn SQL to strengthen database knowledge.
- Flask helps you build Python web applications.
- Docker knowledge improves deployment skills.

Resume Improvement Roadmap

- {'week': 1, 'skill': 'SQL', 'tasks': ['Learn SQL Basics', 'Practice 25 SQL Queries']}
- {'week': 2, 'skill': 'Flask', 'tasks': ['Build a Flask CRUD Application', 'Understand Routing & Templates']}
- {'week': 3, 'skill': 'Docker', 'tasks': ['Install Docker', 'Containerize your Flask Project']}

Job Match Score

75%

Git, Java, Python

SQL

AI Resume Review

Here is the expert recruiter and ATS analysis of your resume.

Strengths:

- * **Clean and Standard Layout:** The resume has a clear, linear structure with standard headings, making it easily scannable for both ATS algorithms and human recruiters.
- * **Strong Academic Foundation:** Being a B.Tech student in Electronics and Computer Engineering at a reputed institution (VIT) gives you a solid, interdisciplinary background.
- * **Balanced Skillset:** You have a good blend of core computer science fundamentals (DSA, Operating Systems) and practical developer tools (Git, GitHub, VS Code, Linux).
- * **Competitive Programming Focus:** Mentioning LeetCode, HackerRank, and CodeChef shows a strong commitment to problem-solving and algorithms.

Weaknesses:

- * **"Learning" and "Future Goal" Labels:** Listing skills as "(Learning)" (e.g., Java, Scikit-Learn) and certifications as "(Future Goal)" (e.g., AWS, ML) significantly weakens your profile. ATS and recruiters screen for *current* competencies, not future intentions.
- * **Unfinished Placeholders:** The resume contains placeholders like "Solved XXX+ DSA problems" and "CGPA: X.XX/10." Leaving these blank or generic makes the resume look incomplete and unprofessional.
- * **Lack of Project Depth & Technical Detail:** The project descriptions are too brief and passive. Describing a project as a "concept" rather than an implemented system suggests it was never actually coded or built.
- * **Missing Essential Tech Stack (ATS Gap):** The resume is missing critical industry-standard skills highlighted by the ATS scanner: **SQL** (essential for data handling), **Flask** (for API development/AI deployment), and **Docker** (for containerization and MLOps).
- * **Unlinked Profiles:** While you mention LeetCode, HackerRank, and GitHub, there are no hyperlinks or usernames provided to verify your achievements.

Suggestions:

- * **Integrate Missing Skills via a Capstone Project:**
 - Learn the basics of **SQL**, **Flask**, and **Docker**.
 - Upgrade your *Intelligent Ship Detection System* by building a web API using **Flask** to serve the CV model, storing detection logs in a **SQL** database, and packaging the entire application using **Docker**. This will instantly bridge your ATS gap and show end-to-end engineering skills.
- * **Remove Weak Qualifiers:**
 - Remove the words "(Learning)" and "(Future Goal)" entirely. If you have a basic grasp of Java or Scikit-Learn, just list them under skills. If you haven't started them, remove them until you do.
- * **Enhance and Quantify Project Descriptions:**
 - Use the **STAR method** (Situation, Task, Action, Result) for your projects.
 - Example revision for Ship Detection:* "Developed a Python-based Computer Vision system using OpenCV and YOLO to detect maritime vessels. Engineered a collision risk assessment algorithm that reduced potential false alarms by 15%. Deployed the prototype using Flask."
- * **Finalize All Placeholders:**
 - Replace "XXX+" with your actual number of solved problems (e.g., "Solved 250+ DSA problems").
 - Input your actual CGPA. If it is below 7.0, you may choose to omit it, but do not leave "X.XX".
- * **Hyperlink Your Profiles:**
 - Make "LeetCode," "GitHub," and "LinkedIn" clickable hyperlinks in the PDF so recruiters can jump straight to your code and profiles with one click.

AI Cover Letter

Dear Hiring Manager,

I am writing to express my enthusiastic interest in the Software Engineer position. As a passionate B.Tech Electronics and Computer Engineering student at VIT Chennai with a strong foundation in software development and computer science fundamentals, I am eager to bring my technical expertise and problem-solving abilities to your team.

The requirements for this role closely align with my academic background and practical experience. I possess a solid understanding of Data Structures and Algorithms, having successfully solved over 300 coding problems across platforms like LeetCode, HackerRank, and CodeChef. Furthermore, my programming proficiency in Python, C, and C++, combined with core knowledge of Object-Oriented Programming, Operating Systems, and SQL, equips me to write efficient, scalable code.

Beyond theoretical knowledge, I have applied my technical skills to build innovative solutions, such as an Intelligent Ship Detection and Collision Risk Warning System utilizing Computer Vision and AI concepts. I am also well-versed in essential development tools like Git and GitHub, ensuring seamless version control and collaborative workflows.

As a dedicated team player with strong leadership and communication skills, I thrive in collaborative environments where I can tackle complex technical challenges. I am eager to leverage my strong analytical mindset and passion for software engineering to contribute meaningfully to your development team.

Thank you for your time and consideration. I look forward to the opportunity to discuss how my skills and enthusiasm align with the needs of your organization.

Sincerely,

MOHANAKUMAR S
